

Joseph Fabrizio Hernandez Gonzalez

Lead Software Architect · Legacy Rescue · Multi-tenant SaaS · AWS
Mexico City, Mexico · Josephfabrizziocorreo@gmail.com
jos5dev.com · github.com/JFabrizzio5 · [LinkedIn](#)

Professional Summary

Software Architect and founder with 7+ years of professional experience leading enterprise architecture, multi-tenant SaaS design, legacy system rescue, and DevOps pipelines on AWS. Graduated in Computer Engineering from IPN UPIICSA at age 19 through the Mexican Professional Experience Accreditation Program (CENEVAL, Acuerdo/Ley 286), skipping the full curriculum through verified professional work. Co-Founder at CometaX, Founder at Rankit.pro, Lead Architect at JMB Accountants, Consultant at PuntoZip (rescuing critical systems for international clients including Merck). Programming since age 10.

Education

Instituto Politécnico Nacional — UPIICSA · Mexico City May 2025
Bachelor's in Computer Engineering (Informatics). **Graduated at age 19 through CENEVAL Acuerdo/Ley 286 (Professional Experience Accreditation Program)**; full curriculum skipped via verified professional experience. **Professional thesis/technical exam: EGAL** — IoT luxury hotel access system.

IPN CECYT 9 · Mexico City 2020 – 2023
Technician in Programming. Advanced one semester under Ley 286 program.

EST 43 · Mexico City 2018 – 2020
Technician in Electronics and Control Systems.

Self-Taught since 2016
Continuous self-directed learning in software engineering, architecture, and emerging technologies since age 10.

Professional Experience

Lead Software Architect & Consultant — JMB Accountants & Consulting **2023 – Present**
Mexico City · Hybrid

Phase 2 · Lead Software Architect & Consultant

- Led full system migration from a Laravel monolith to a **multi-tenant, multi-service architecture**, addressing growth needs and technical debt.
- Designed and implemented a **fully auditable transaction system** to ensure compliance with fiscal audits and Mexican SAT regulatory requirements.
- Developed contingency and disaster recovery plans, increasing system resilience and reducing business risk.
- Implemented **Redis caching, Redis Streams (Pub/Sub), and WebSockets** for real-time communication, reducing latency and improving system responsiveness.
- Optimized server performance and data pipelines to handle **millions of XML invoices** efficiently.
- Applied **Screaming Architecture** principles, Docker, and microservices on Linux VPS deployed from scratch to minimize technical friction between frameworks.
- Managed development teams via **Jira**, monitoring tasks, sprints, and progress to ensure deadlines and quality standards.
- Provided consulting services to enterprise clients, managing requirements, attending executive meetings, and delivering monthly project reports.
- Led **Java Spring Boot and Angular projects for 16 gas stations**, managing resilient architecture design, client negotiations, and multi-million peso budgets.
- Formalized documentation, workflows, and coding standards for previously undocumented systems.

Phase 1 · Software Engineer (2023)

- Developed and maintained a **Laravel + Livewire + MongoDB** monolith managing all core business modules for multiple clients.

- Built modules for **XML invoice analysis** and automated integrations with **SAT (Mexican Tax Authority) web services**, improving reporting and operational efficiency.
- Refactored legacy code and implemented internal frameworks to standardize data processing and development workflows.
- Prepared the system for future migration to a scalable multi-tenant, multi-service architecture.

Senior Software Engineer / Software Architect (Consultant) — PuntoZip Software Consulting Jan 2025 – Present

Mexico City · Remote Global

- **Rescued a life insurance company** by migrating legacy **Visual Basic .NET 2** systems to **AWS** without access to the original codebase, ensuring secure and fully functional operations.
- Provided team training and mentorship on software architecture, **Laravel-Inertia, Python, FastAPI microservices, AWS**, and junior recruitment processes, achieving **100% effectiveness**.
- Upgraded legacy PHP Laravel services to modern Laravel, Vue 3, and MySQL versions.
- Migrated payment microservices with **100% uptime (zero disruption)** to production.
- Designed and implemented documentation processes for working with international clients (e.g., **Merck**) under **ISO compliance regulations**.
- Built and automated DevOps pipelines using **Docker, Kubernetes, and Python scripts** for continuous deployment, monitoring, and backups (VPS/AWS).

Freelance Software Engineer — Independent

2020 – 2023

Remote

- Developed custom software solutions for companies and independent clients.
- Designed database models and implemented RESTful APIs adapted to complex business rules.
- Deployed web applications to the cloud, forging the technical foundations of current architectures.

Selected Projects

CometaX — Co-Founder (SaaS & Consulting, stealth)

2025 – 2026

- Co-founding a SaaS and consulting company focused on enterprise solutions and scalable software architectures.
- Designing product strategy, internal frameworks (**cometax** CLI generator), and consulting processes for client efficiency and growth.
- Instagram: [@cometaxcompany](#)

Rankit.pro — Founder

2026

- Founded a SaaS platform for managing eSports and gaming tournaments with **OBS live integrations**, streamlining registration, scheduling, and live scoring for Fortnite tournaments.
- Led development, deployment, and feature roadmap while coordinating a small team.
- Repositories: [Laravel](#), [.NET](#), [Python Visibility Tracker](#).

UpiPlanet.com — Founder

2024

- Developed a school management platform to automate scheduling and administrative tasks using AI tools for IPN UPIICSA students.
- Created and published a Google Chrome extension with **2,000+ verified downloads (MODSAES-Open)**.
- Improved operational efficiency and reduced manual workload for students and staff.

EGAL — Professional Thesis (CENEVAL Acuerdo/Ley 286)

2025

Luxury hotel access system combining **ESP32 hardware** for electromagnetic locks, **FastAPI backend** with JWT authentication and WebSockets, **React Native mobile app** with NFC/QR for contactless check-in, and real-time web dashboards for concierge operations.

- Technologies: ESP32, FastAPI, React Native, MongoDB, Redis, MQTT, JWT, NFC, QR, WebSockets, Docker.
- Auto-documentation: [DeepWiki](#) · Repository: [GitHub](#).

Technical Skills

Backend: Laravel (Livewire, Inertia, Volt 2/3/4), PHP, Python (FastAPI, Django, Flask, Pandas), TypeScript, Node.js, Java, Spring Boot, .NET, Kotlin.

Frontend: Vue 3, React Native, Angular, Tailwind CSS, Bootstrap 4/5, jQuery, Jetpack Compose, HTML5, CSS3.

Databases & Data: PostgreSQL, MySQL, MongoDB, Redis, Redis Streams (Pub/Sub), Firebase, Pandas, PowerBI.

Cloud & Infrastructure: AWS, Docker, Kubernetes, Microservices, Linux VPS, Nginx, Apache, GitHub Actions.

IoT & Hardware: ESP32, NFC, QR, MQTT, WebSockets.

Architecture & Methodology: Screaming Architecture, Multi-tenant SaaS, Pub/Sub, RESTful APIs, JWT, ISO Compliance, Disaster Recovery, Jira, Agile.

Soft Skills: Technical Leadership, Team Mentoring, Project Management, Client Negotiation, Strategic Planning, Process Optimization, Documentation, Innovation.

Awards & Recognition

- **DonkPink Robotics Team** — Recognized at state and national robotics competitions.
- **EST 43 Robotics Team** — 3rd and 4th place at national Minisumo competition (2018–2020).
- **3,821 GitHub contributions in 2025** — sustained open-source and project activity.

Languages

- Spanish — Native.
- English — Professional working proficiency.
